CHECK POINT™

Harmony

Harmony Endpoint and Browser Data Loss Prevention (DLP)

Protect Data, Automate Compliance, Increase Productivity

In any successful organization, data is exchanged constantly between customers, vendors, and partners through various types of devices. With the introduction of Generative AI tools to increase productivity, data is shared at a higher rate than ever.

Data Loss, whether accidentally by employees or intentionally by hackers, can result in the loss of intellectual property, customer and employee data and can cause both financial and reputational damage to your organization.

Boosting productivity without losing data

Check Point Harmony Data Loss Protection (DLP) offers comprehensive visibility into data movements within your organization, empowering you to establish security policies that automatically enforce your guidelines. This ensures organizational safety and compliance while maintaining employee productivity.

Protect Data, Remain Productive

Allow application use without worrying about data leakage

Prevent Data Loss

Protect your organization from financial and brand damage due to data loss

Maintaining Compliance

Automate compliance with data regulations
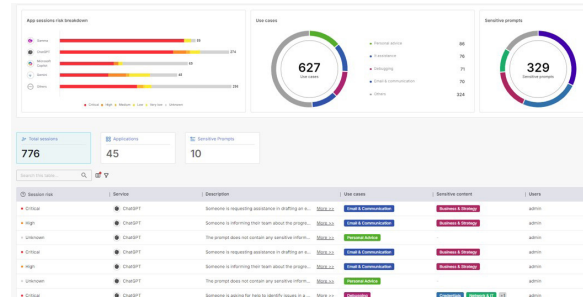

Complete Consolidation

Single security platform, means a reduced TCO

Harmony Data Loss Protection is designed to prevent loss of valuable information with ease through our browser-based DLP solution, protecting all your endpoints in a simple and powerful way, tailored for the digital workspace.

CHECK POINT™

Gen AI Security

Our solution empowers safe use of GenAI tools while protecting your organization's assets. It prevents sensitive data submission, blocks copy-pasting of confidential information, provides usage insights, and enables customized policies. With AI-powered classification, we address privacy concerns and safeguard intellectual property in GenAI applications.

Consolidated Data Loss Prevention to keep your organization safe and productive

Safe Use of GenAI Platforms

- AI Based Classification, to allow restrictions on unstructured data
- App Inventory for usage tracking
- Risk Insights based on end users' behavior

Multiple Data Types Restrictions

Multiple options to data type setting, including 700+ predefined data types, custom data types, and data type grouping

Clipboard restrictions
- Copy-Paste restrictions
- Print Restrictions
